[Prompt 1] — Product Architecture & Mobile-First Direction

Me:
look at the kayro intern pdf. i want a dual-sided app for maya sen.
side A is client booking, side B is nutritionist dashboard.
dont make an ai slop website with generic bootstrap or purple gradients. make it feel like a real mindful wellness tool.
first off, look at the brief carefully. what did they miss?
think about: what constitutes an available slot? there are no working hours or slot lengths defined in the brief.
and also what happens when someone cancels? the brief only has booked, done, no-show. where does a cancelled booking go? it cant be a no-show because that ruins her data.
give me a clean lightweight architecture with local state sync.

AI:
Proposed creating a two-column desktop layout featuring a simulated mobile phone frame on the right and an informative marketing panel on the left, using localStorage and sample data.

[Prompt 2] — Strong Pushback on AI Fluff & Fake Mockups

Me:
no, stop. why are you putting a fake iphone mockup with a dynamic island and marketing text inside the screen?
this is a web app, not a dribbble screenshot.
get rid of the device toggle, the phone bezel, and the sidebar.
make it a real responsive web app:

- mobile first (390px default), single column, bottom anchored actions.
- desktop: max-w-md centered for client, max-w-4xl clean table for nutritionist.
- navigation: just a quiet link in the footer to switch between client and nutritionist. no big banners.
- and add a 4th status: "Cancelled" in slate grey. when cancelled, free the slot immediately.

AI:
Refactored styles to remove the simulated phone frame and implemented mobile-first responsive breakpoints.

[Prompt 3] — Deep Dive on Part 1 (The 25% No-Show Puzzle)

Me:
lets solve part 1 properly.
why do people actually ghost a nutritionist?
most people think clients "forgot". they dont forget. this is nutrition, not a dental cleaning.
people ghost because of food shame. they ate junk all week, they dread being judged, and typing an apology on whatsapp feels awful so they procrastinate until the slot passes.
also commute friction: running 10 mins late, they assume the whole 30 min session is blown.
so here is the product fix:

1. a 2-hour pulse with 3 simple taps: "Yes coming", "Running late? Switch to 15-min phone call", "Reschedule with 0 guilt".
2. on mayas dashboard, if not confirmed by 90 mins before, flag it as "Unconfirmed (Risk)". so she is never sitting there blind.
   build the "Still coming?" button on the next appointment card and link it to the dashboard.

AI:
Added the "Still coming?" button and unconfirmed risk indicator.

[Prompt 4] — Edge Case Catch: Duplicate Booking in Sample Data (Riya Shah)

Me:
wait look at the sample data from the pdf:
riya shah is listed on 24/10 at 10:00 and ALSO on 25/10 at 4 pm!
the assignment brief explicitly says clients should not be able to double-book.
why did she have two bookings?
because in whatsapp + excel, when riya texted to reschedule to sunday, maya typed sunday in excel but forgot to delete saturday! then saturday came, riya didnt show up, and maya thought it was a no-show. it was just spreadsheet drift!
so in the app:

1. block duplicate active bookings: if riya or same phone tries to book another active slot, show toast "Already present! You already have an active booking on [date] at [time]".
2. enforce atomic reschedule: picking a new date must move the slot and free the old slot in one step.
3. enforce max 1 reschedule so clients dont abuse it.

AI:
Added duplicate phone/name check and atomic reschedule logic with 1-time limit.

[Prompt 5] — Polish & Data Integrity

Me:
few corrections:

1. phone numbers must strictly be 10 digits with a +91 prefix group. format as +91 XXXXX XXXXX everywhere.
2. in the dashboard status dropdown, you literally wrote "Booked (Blue)" in the text option. why are you putting color names in option text? remove that, color should only be the css badge.
3. add past date lockout: slots before today or past times must be disabled.
4. add an excel download button on the dashboard that exports clean csv with utf-8 bom so excel opens it without weird symbols.
5. add a reminder column with a 1-tap "Remind" button that flips to "✓ Sent" and gives a toast.

AI:
Implemented phone normalization, cleaned dropdowns, added CSV export with UTF-8 BOM, and added reminder tracking.

[Prompt 6] — Privacy Isolation on First Arrival

Me:
when i open the website in a new tab or incognito, it defaults to riya shahs phone and shows her upcoming appointment!
why would a new visitor see another patients private booking?
fix this:

- default client phone should be empty.

- when someone lands on `/`, they should see about dr. maya sen (bio, msc clinical nutrition, 10+ yrs exp, 30-min sessions) and a direct button "Book an appointment".
- only once they book or enter their own number should it switch to their personal consultations view.
- add an "Exit" button in the personal view so they can sign out and go back to dr. mayas landing.

AI:
Implemented doctor profile landing card and client personal view toggle.

[Prompt 7] — Cancellation Confirmation Safety & Run Instructions

Me:
two things:

1. for cancellation, add an "are you sure?" confirmation dialog before cancelling so someone doesnt tap it accidentally. if they say yes, free the slot, move it to past, and show the toast.
2. make sure the readme has clear, no-bs steps to run from scratch using just python server.py. no corporate jargon or ai fluff in the markdown files.

AI:
Added `window.confirm` to cancellation workflow and updated documentation.

[Prompt 8] — Removing Format Artifacts & Missing Phone Edge Case (Meera Iyer)

Me:
few cleanups:

1. remove the format like virtual and in person completely. from appointments, dashboard, api, sample data, everything. the brief never asked for format categorization, it just adds visual clutter.
2. in appointments.json, clean it up: keep only the test data from the brief and NO duplicates (keep 1 clean booking for riya shah so the test dataset obeys the no double-booking rule).

3. look at meera iyer: she has no phone number in the mock table. how does maya remind or contact a client with no number?
   on the dashboard, flag her record as "No phone on file", lock the remind button with an informative badge, and show a toast if clicked telling maya to collect contact info when meera arrives at the clinic.

AI:
Removed all format fields, deduplicated appointments.json, added missing phone badge, and disabled reminders for clients without phone numbers.
